# GREEN POWER CONTAINER

project

## INTEGRATION OF GREEN POWER SOURCES (PV PANELS AND SMALL WIND TURBINE)

Energy used for heating, lighting and water cleaning treatment (30-50qm of cleaned water per day) . All placed in 20 Ft container including battery storage and electronic management system and back-up petrol generator. **Installed output in total of 45 kWp.**

### List of Technologies

- 1 Wind Turbine**  
Boiling Water, Heating of Buildings, Direct Consumption, Charging of LENR Cells, 5-10 kWp
- 2 PV folios of Wind Turbine Blades**  
Charging of LENR Cells, 700 Wp
- 3 PV panels on the roofs**  
Charging of LENR cells, direct consumption, 5 - 10 kWp
- 4 Water Turbine in Pipelines**  
Charging LENR Cells, 10 kWp – 300 kWp
- 5 Using LENR Cells for Heating**  
(Top up input power five times on the output)
- 6 Battery Storage of Generated Power**
- 7 Central Electronic Management System**
- 8 Cleaning of Waste Water - Recycling Water**
- 9 Water Treatment - Increase of quality of water**

- - - electricity  
— drinking water  
— waste water
